

Scientific PDF Math Regression

这是一份公开安全的中文/英文/数学混合渲染回归输入，用于验证默认正式笔记路线是否保留数学语义和可读排版。

Inline math next to Chinese text: 估计量 $\hat{x}_i$ should keep the hat and subscript. Greek notation $\alpha_i + \beta^2$ should remain mathematical text, not plain prose.

Display sum and integral:

$$\sum_{i=1}^n w_i y_i + \int_0^1 f(t) dt = \mu$$

Gradient and operators:

$$\nabla_{\theta} \mathcal{L}(\theta) = X^{\top} (X\theta - y) + \lambda \theta$$

Matrix and blackboard symbols:

$$A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}, \quad v \in \mathbb{R}^2$$

Long formula:

$$\operatorname{argmin}_{\theta \in \mathbb{R}^p} \left[\frac{1}{2n} \sum_{i=1}^n (y_i - x_i^{\top} \theta)^2 + \lambda \sum_{j=1}^p |\theta_j| \right]$$

指标	数值	说明
Dice	0.83	表格行应保留为可读列
Error	1.20	不应因为表格存在而缩小普通段落

The closing paragraph is ordinary prose. It should not be classified as a table line, and it should keep the same body-text identity as the earlier paragraphs.
